BASE PAPER 1:

TRACKING THE COVID ZONES THROUGH GEO-FENCING TECHNIQUE

- Anto Arockia Rosaline R. Department of Information Technology, Rajalakshmi Engineering College, Chennai, India
- Lalitha R. Department of Computer Science and Engineering, Rajalakshmi Institute of Technology, Chennai, India
- Hariharan G. Department of Information Technology, Rajalakshmi Engineering College, Chennai, India,
- Lokesh N. Rax-Tech International, Chennai, India.

ABSTRACT:

- Because of the outbreak of Covid 19, the entire world is thinking of new strategies, preventive measures to safeguard the human life from the widespread of the pandemic.
- The areas where people are affected are marked as containment zones and people are not allowed to exit out of those areas.
- Similarly, new people are not allowed to enter inside those areas. Hence, the purpose of this paper is to propose a methodology to track the Covid zones, to enhance and tighten the security measures.
- A geo-fence is created for the containment zone.
- The person who enters or exits out of that particular zone will be monitored and alert message will be sent to that person's mobile.
- After tracking the location of a suspicious individual, the geo-fenced layer is mapped in the area and then the virtual perimeter is used for further trapping process.
- This geofenced layer can be viewed by the citizens as soon as it is updated by the Covid monitoring team.
- The geofencing is a concept of building a virtual perimeter area.
- This virtual perimeter monitoring system helps in monitoring the containment zones effectively.

- It reduces operational costs by using an automated system based on wireless infrastructure. It also alerts the authorities immediately to catch the violators.
- Thus, it helps to speed up the process of inspecting the containment zones and monitoring the individuals who violate the rules given by government.

BASEPAPER 2:

A CASE STUDY FOR ASSURED CONTAINMENT

- Kelly J. Hayhurst
- Jeffrey M. Maddalon
- Natasha A. Neogi NASA Langley Research Center NASA Hampton, Virginia USA

ABSTRACT:

- While incremental steps are being taken to integrate unmanned aircraft systems (UAS) into the various national airspace systems, much work remains to establish appropriate regulatory infrastructure that allows UAS larger than 55 lb to operate for commerce.
- The magnitude of that effort is compounded by the wide-ranging variety of UAS types and possible applications, as well as the diversity in quality and provenance of UAS components.
- The FAA has suggested developing design standards tailored to specific applications and operating environments as an approach to facilitate integration and safe operation of some UAS.
- This paper introduces a case study to investigate design standards for a midsize unmanned rotorcraft operating in a rural environment. A key aspect of this study is the concept of using a certifiable containment system, different from a conventional

geofencing application, to ensure that the unmanned aircraft does not escape its intended operational area.

- The proposed assured containment system is expected to reduce the effort needed to regulate some UAS that could not currently meet rigorous aircraft design standards and fall outside of the parameters for operation outlined in the proposed small UAS rule.
- This paper discusses how assured containment may be a useful approach to limiting risk and reducing an otherwise prohibitive certification burden to enable UAS operations in confined areas.
- The case study examines the potential effect the assured containment approach might.

BASEPAPER 3:

A SURVEY OF COVID-19 CONTACT TRACING APP

- Cyber Security Cooperative Research Centre (CSCRC), Perth, WA 6027, Australia
- School of Computer Science and Engineering (CSE), University of New South Wales (UNSW), Sydney, NSW 2052, Australia
- CSIRO Data61, Marsfield, Sydney, NSW 2122, Australia
- School of Electrical Engineering and Telecommunications (EE&T), University of New South Wales (UNSW), Sydney, NSW 2052, Australia
- ECU Security Research Institute (ECUSRI), Edith Cowan University, Perth, WA 6027, Australia

ABSTRACT:

- The recent outbreak of COVID-19 has taken the world by surprise, forcing lockdowns and straining public health care systems.

-
- COVID-19 is known to be a highly infectious virus, and infected individuals do not initially exhibit symptoms, while some remain asymptomatic.
- Thus, a non-negligible fraction of the population can, at any given time, be a hidden source of transmissions.
- In response, many governments have shown great interest in smartphone contact tracing apps that help automate the difficult task of tracing all recent contacts of newly identified infected individuals.
- However, tracing apps have generated much discussion around their key attributes, including system architecture, data management, privacy, security, proximity estimation, and attack vulnerability.
- In this article, we provide the first comprehensive review of these much-discussed tracing app attributes.
- We also present an overview of many proposed tracing app examples, some of which have been deployed countrywide, and discuss the concerns users have reported regarding their usage.
- We close by outlining potential research directions for next-generation app design, which would facilitate improved tracing and security performance, as well as wide adoption by the population at large.

BASEPAPER 4:

DEVELOPMENT OF AN ANDROID APPLICATION FOR VIEWING COVID-19 CONTAINMENT ZONES AND MONITORING VIOLATORS WHO ARE TRESPASSING INTO IT USING FIREBASE AND GEOFENCING

- Ranajoy Mallik (◇ wranajoy@gmail.com)Jadavpur University
<https://orcid.org/0000-0002-9043-6312>
- Amlan Protim Hazarika Jadavpur University
- Sudarshana Ghosh Jadavpur University
- Dilip Sing Jadavpur University
- Rajib Bandyopadhyay Jadavpur University

ABSTRACT:

- The World Health Organization has declared the outbreak of the novel coronavirus, COVID-19 as pandemic across the world.
- With its alarming surge of affected cases throughout the world, lockdown and awareness (social distancing, use of masks etc) among people are found to be the only means for restricting the community transmission.
- In a densely populated country like India, it is very difficult to prevent the community transmission even during lockdown without social awareness and precautionary measures taken by the people. Recently, several containment zones had been identified throughout the country and divided into red, orange and green zones, respectively.
- The red zones indicate the infection hotspots, orange zones denote some infection and green zones indicate an area with no infection.
- This paper mainly focuses on development of an Android application which can inform people of the COVID-19 containment zones and prevent trespassing into these zones.
- This Android application updates the locations of the areas in a Google map which are identified to be the containment zones.

- The application also notifies the users if they have entered a containment zone and uploads the user's IMEI number to the online database. With this IMEI number, the police can keep an eye on the people who are frequently violating the lockdown rules.
- To achieve all these functionalities, many tools and APIs from Google like Firebase and Geofence are used in this app.
- Therefore, this application can be used as a tool for creating further social awareness about the arising need of precautionary measures to be taken by the people.

BASEPAPER 5:

TECHNOLOGICAL AND ANALYTICAL REVIEW OF CONTACT TRACING APPS FOR COVID-19 MANAGEMENT

- Rajan Gupta, Gaurav Pandey, Poonam Chaudhary & Saibal K Pal

ABSTRACT:

- Role of technology is improving for COVID-19 management all around the world.
- Usage of mobile applications, web applications, cloud computing, and related technologies have helped many public administrators worldwide manage the current pandemic.
- Contact tracing applications are such mobile app solutions that are used by more than 100 countries today.
- This study presents a structured research reviewbased framework related to multiple contact tracing applications.

- The various components of the framework are related to technological working, design architecture, and feature analysis of the applications, along with the analysis of the acceptance of such applications worldwide.
- Also, components focusing on the security features and analysis of these applications based on Data Privacy, Security Vetting, and different attacks have been included in the research framework.
- Many applications are yet to explore the analytical capabilities of the data generated through contact tracing.
- The various use-cases identified for these applications are detecting positive case probability, identifying a containment zone in the country, finding regional hotspots, monitoring public events & gatherings, identifying sensitive routes, and allocating resources in various regions during the pandemic.
- This study will act as a guide for the users researching contact tracings applications using the proposed four-layered framework for their app assessment

BASEPAPER 6:

APPLICATION FOR COVID-19 REAL TIME COUNTER

- Omkar Dhok, Yash Dasouni, Harsh Dubey, Prasanna
- International Journal of Research in Engineering and Science (IJRES)

ABSTRACT:

- The World Health Organization has declared the outbreak of the novel coronavirus, Covid-19 as pandemic across the world.
- With its alarming surge of affected cases throughout the world, lockdown, and awareness (social distancing, use of masks etc.)

among people are found to be the only means for restricting the community transmission.

- In a densely populated country like India, it is very difficult to prevent the community transmission even during lockdown without social awareness and precautionary measures taken by the people.
- Recently, several containment zones had been identified throughout the country and divided into red, orange and green zones, respectively.
- The red zones indicate the infection hotspots, orange zones denote some infection and green zones indicate an area with no infection.
- This paper mainly focuses on development of an Android application which can inform people of the Covid-19 containment zones and prevent trespassing into these zones.
- This Android application updates the locations of the areas in a Google map which are identified to be the containment zones.
- The application also notifies the users if they have entered a containment zone and uploads the user's IMEI number to the online database.
- To achieve all these functionalities, many tools, and APIs from Google like Firebase and Geofencing API are used in this application.
- Therefore, this application can be used as a tool for creating further social awareness about the arising need of precautionary measures to be taken by the people of India.

BASEPAPER 7:

GEOFENCING REQUIREMENTS FOR ONBOARD SAFE OPERATION MONITORING

- Christoph Torens¹ ·
- Florian Nikodem¹ ·
- Johann C. Dauer¹ ·
- Sebastian Schirmer¹ ·
- Jörg S. Dittrich¹

ABSTRACT:

- The new concept for operation of drones, published by EASA in 2015, enables new ways to influence and possibly reduce the necessary safety targets of certain system components without reducing the overall safety of the unmanned aircraft system (UAS).
- Based on the safety assessment, the specific category enables new aircraft system architectures and mission designs.
- In this context, this paper analyzes runtime monitoring as a strategy to contain the UAS in its operational volume.
- To assure predefined properties in flight and thus assure the safety of the operation in progress with a high robustness, a formal methodology for safe operation monitoring is utilized.
- With this approach, this work targets to link the concept of safe operation monitoring with the upcoming regulations regarding the specific category and the specific operation risk assessment.
- monitoring is geofencing, the capability to contain a UAS in a previously restricted area. In the regulatory framework of a specific operation, risk assessment is required and so is the containment of the UAS in its operational volume.
- The functional and safety requirements for geofencing regarding their impact on the underlying specific operation risk assessment are discussed.

- To facilitate this discussion, a taxonomy of geofencing characteristics is derived based on a literature survey.
- Consequently, the geofencing requirements are assessed regarding their robustness and applicability for certification purposes.
- As a result, by monitoring the integrity of the system at runtime using geofencing as an example, it is investigated if the requirements and thus costs of development and certification process for the remaining components can be reduced.

BASEPAPER 8:

COVID-19 HOME QUARANTINE ENFORCEMENT

- Jiajie Tan,
- Edmund Sumpena,
- Weipeng Zhuo,
- Ziqi Zhao,
- Mengyun Liu, and
- S.-H. Gary Chan

ABSTRACT:

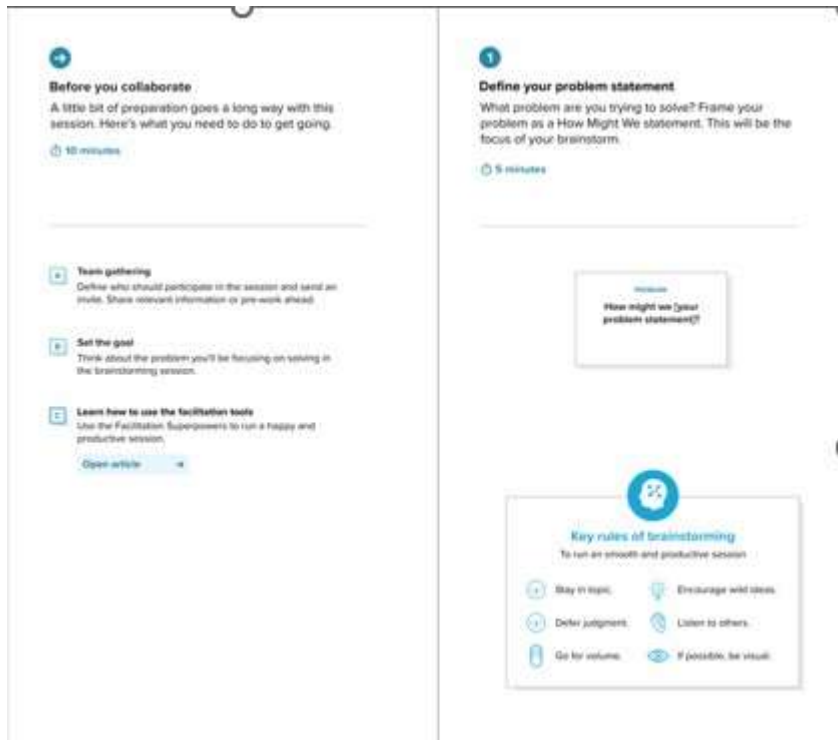

- Containment is the first-priority measure in infection control to curb the spread of highly infectious diseases such as COVID-19.
- Home quarantine is one such measure to keep people at their accommodations for the incubation period (typically 14 days).
- Compared to dedicated monitoring centers, home quarantine is a more cost-effective and comfortable approach to isolate a large number of low-risk people.

- However, efficient monitoring of confinees inside their accommodations is a challenging problem because the quarantined locations are scattered throughout the city.
- We propose and study SignatureHome, an automated IoT-based geofencing algorithm to cost-effectively monitor confinees.
- The core principles of SignatureHome was adopted by the Hong Kong government and implemented as an app to enforce home quarantine order in March 2020 for hundreds of thousands of entrants from other regions.
- The system employs waterproof Bluetooth Low Energy wristbands that are uniquely paired with the confinees' smartphones. SignatureHome uses the identifiers of the environmental network facilities (Wi-Fi access points and cellular networks) as the home signature.
- By comparing the current observed signals of the phone with the home signature, the algorithm can efficiently determine whether the user is within the geofenced area. SignatureHome is computationally efficient, responsive, privacy-preserving, cost-effective, and adaptive to home diversity and changing environments.
- Our experimental results validate its design and high accuracy in terms of precision, recall, F-measure, and false alarm rate.

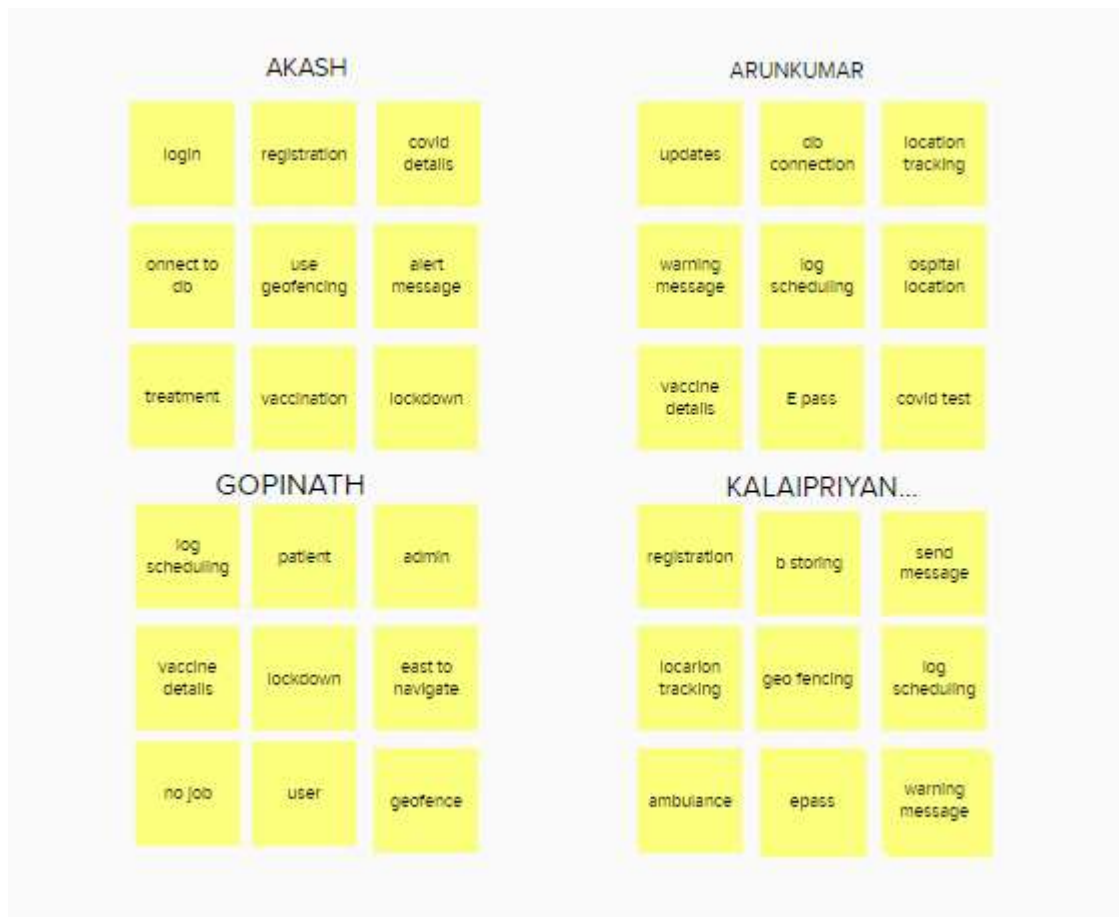

Ideation Phase

Brainstorm & Idea Prioritization

Step-1: Team Gathering, Collaboration and Select the Problem Statement

Step-2: Brainstorm, Idea Listing and Grouping

STEP 3: GROUP IDEAS

Group ideas

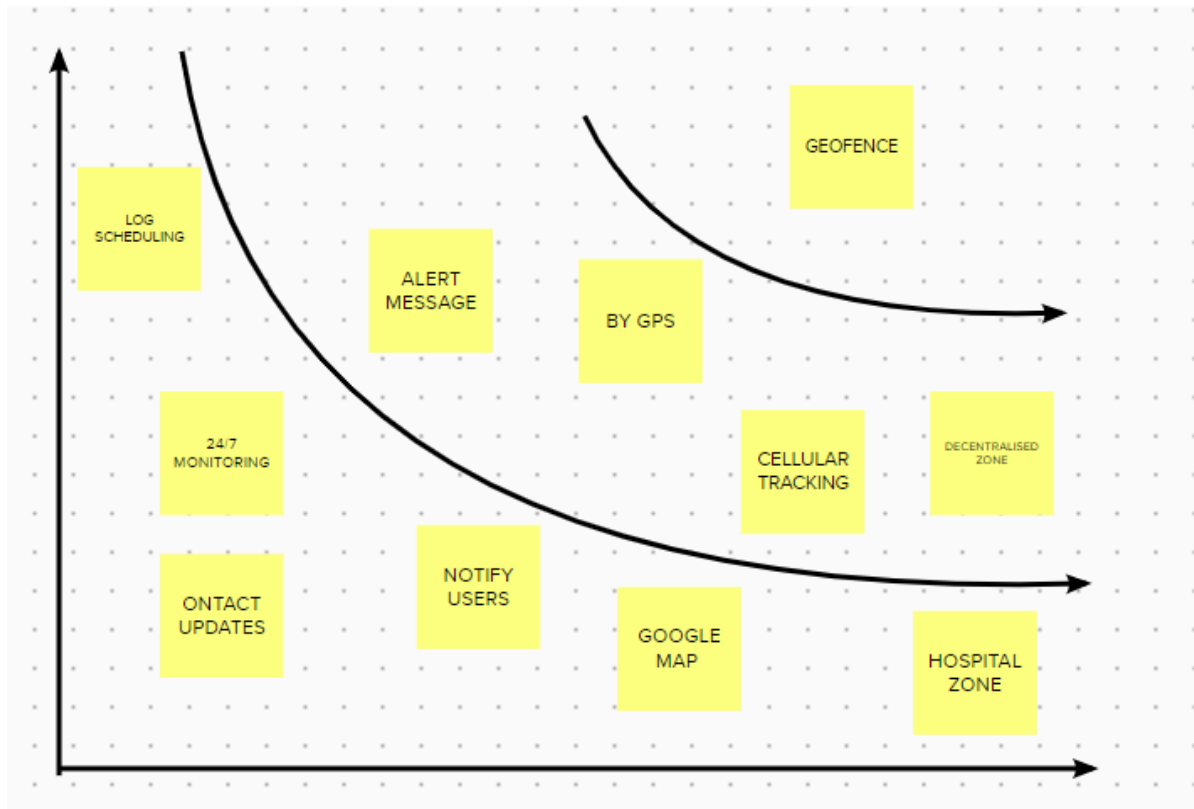

Take turns sharing your ideas while clustering similar or related notes as you go. In the last 10 minutes, give each cluster a sentence-like label. If a cluster is bigger than six sticky notes, try and see if you can break it up into smaller sub-groups.

Step-4: Idea Prioritization

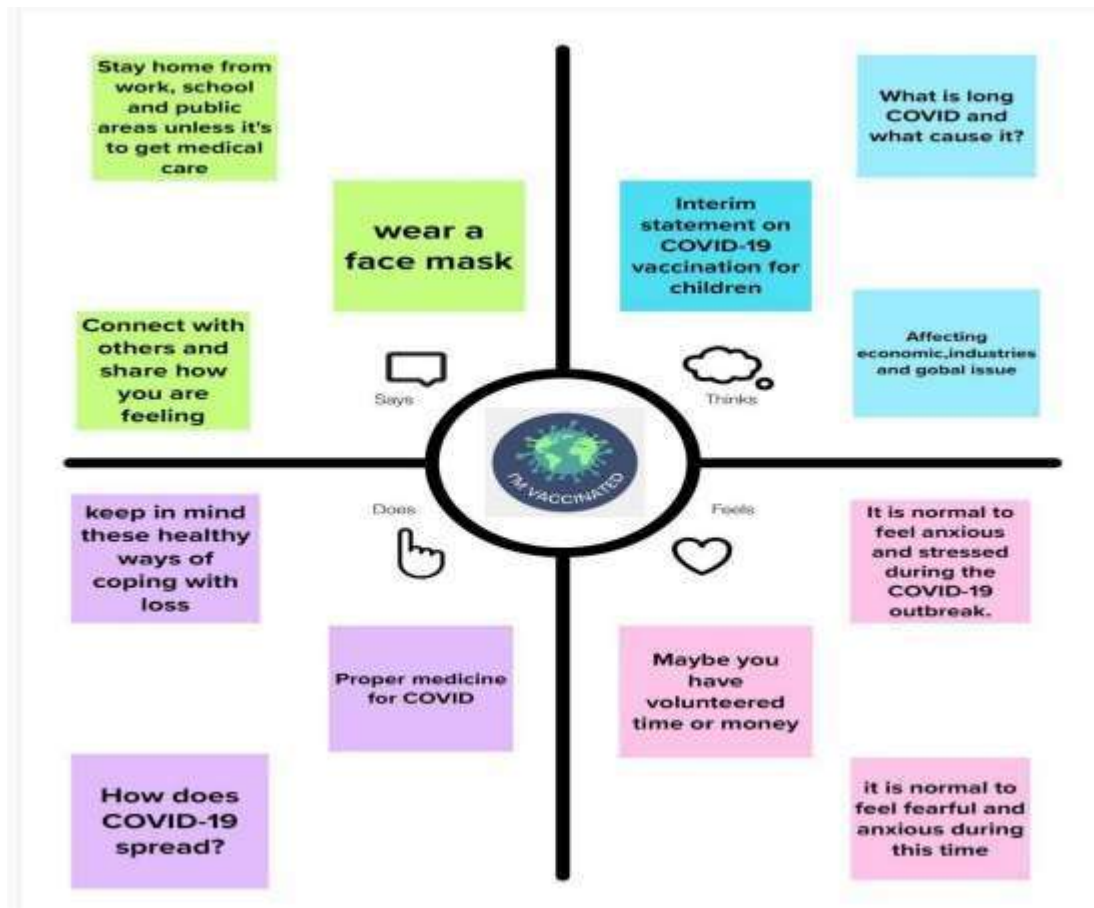

Prioritize

Your team should all be on the same page about what's important moving forward. Place your ideas on this grid to determine which ideas are important and which are feasible.

EMPATHY MAP:

TEAM ID:PNT2022TMID12464

PROJECT DESIGN PHASE - I

PROPOSED SOLUTION

Date	04/11/ 2022
Team ID	PNT2022TMID12464
Project Name	Containment Zone Alerting Application
Maximum Marks	2 Marks

Project team shall fill the following information:

•	Idea / Solution description	Constant updation of result collected from the testing center about the affected people can be merged with the application. We intend to collaborate our application with google map to locate the containment zone.
•	Novelty / Uniqueness	It will alert the user before reaching the place using the current location of the user ,whether the place is affected or not . If affected it will enroute alternate way.
•	Social Impact / Customer Satisfaction	This project will satisfy the customer need . For example: Suppose if we travel to a place where a specific area is affected by covid this application will alert the user(customer) which intern reduces the cause of infection by the affected people.
•	Business Model (Revenue Model)	1.No.of users downloading the application 2.In association with pharmacy(telemedicine) 3.Internet usage

PROJECT DESIGN PHASE - I

PROBLEM SOLUTION FIT

Date	04/11/2022
Team ID	PNT2022TMID12464
Project Name	CONTAINMENT ZONE ALERTING APPLICATION
Maximum Marks	2 Marks

Defining CS, fit into CC	1. CUSTOMER SEGMENT(S) The user/customer who belongs to the business area.	6. CUSTOMER CONSTRAINTS There is a limitation of using the application because the user/customer who is having knee braces if this application can work on it easily.

Job to be done / Problem	2. JOBS-TO-BE-DONE / PROBLEMS It is easy to study for the issues and risks in containment zones. It is a best way to make the people ready to identify the disaster region and prevent from danger. Detection and recognition of risks areas using cloud computing are very efficient at providing information about containment zones at the earliest.	9. PROBLEM ROOT CAUSE Usually, we cannot identify the number of cases on map in the particular location. Whether it is a real time or normal zone or any situation to survive in the particular zone.

Job to be done / Problem	3. TRIGGERS Movement in containment zones will be monitored to ensure that nobody leaves at risk, except for medical assistance.	10. YOUR SOLUTION The application is built which uses this model. The application updates you to stay up to date regarding the number of cases both locally and nationally. This accurate position can help you secure your risk further.
	4. EMOTIONS: BEFORE / AFTER Before - The user/customer who never have used before makes their actions. After - As the user knows how to use the application then they will become comfortable and friendly in environment.	

PROJECT DESIGN PHASE - I

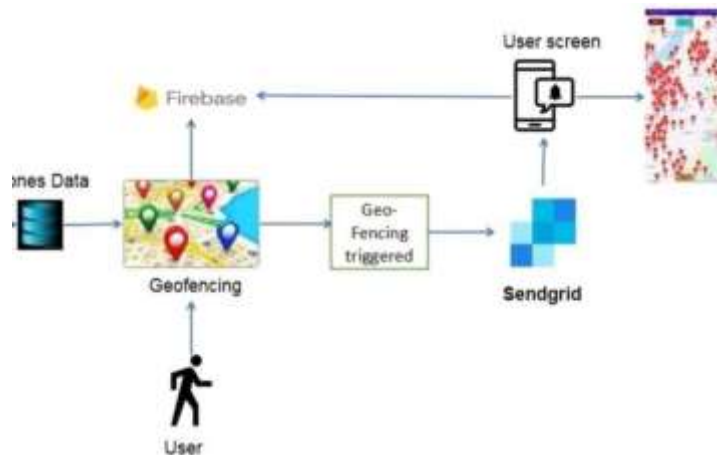

SOLUTION ARCHITECTURE

Project Design Phase-II
Functional Requirements (Functional & Non-Functional)

Date	3 November 2022
Team ID	PNT2022TMID12464
Project Name	Containment Zone Alerting Application
Maximum Marks	4 Marks

Functional Requirements:

The following are the functional requirements of the proposed solution.

FR.No.	Functional Requirements	Sub Requirements
F-1	User Registration	Registration through user mobile number.
F-2	User Confirmation	Confirmation via number Confirmation via OTP
F-3	Hospital registration	Registration through form using Hospital ID
F-4	Hospital Entry	Collecting case data and storing it in the Database Doctors for medical consultation.
F-5	Permissions	Location, Storage, Contacts
F-6	Subscription	Taking special care of subscription members and monitoring their day-to-day activity.
F-7	Chat Bot	Minimal medical Suggestions Product sales

Non-functional Requirements:

The following are the non-functional requirements of the proposed solution.

F.No.	Non-Functional Requirements	Description
NF-1	Usability	People can use this app to track the contaminated zone and take precautions before they are affected while travelling
NF-2	Security	Using “Geofencing technology for location and data encryption” to protect data.
NF-3	Reliability	valid medical suggestions and proper guidance is given in the application.
NF-4	Performance	The geo-fencing algorithm is updated daily and shows the day-to-day updates of the contaminated zones using log scheduling.
NF-5	Availability	Medicinal Recommendations, Test kits, Doctor suggestions in the Contaminated zones are available in applications.
NF-6	Scalability	Users are provided with medical services online and giving awareness to people by giving therapeutic medicines Also monitoring the movements in pandemic zones and alerts before they are affected.

TECHNOLOGY ARCHITECTURE

Team ID	PNT2022TMID12464
Project Name	CONTAINMENT ZONE ALERTING APPLICATION

TECHNICAL ARCHITECTURE:

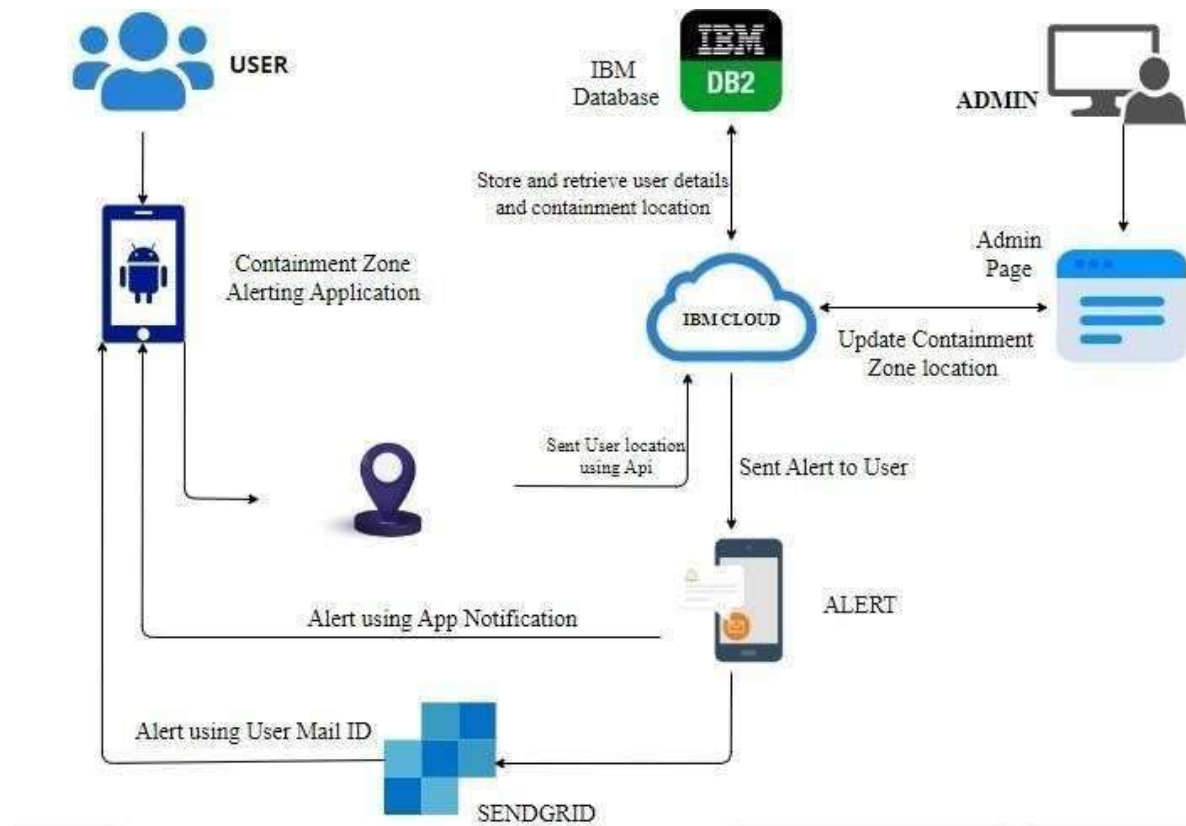

Table-1: Components & Technologies:

S. No	Component	Description	Technology
1.	User Interface	How user interacts with application e.g. Web UI, Mobile App, Chatbot etc.	HTML, CSS, Java, XML, JavaScript / Angular Js / React Js etc.
2.	Application Logic-1	Logic for a process in the application	Java / Python-Flask
5.	Database	Data Type, Configurations etc.	MySQL, NoSQL, etc.
6.	Cloud Database	Database Service on Cloud	IBM DB2, IBM Cloudant etc.
7.	File Storage	File storage requirements	IBM Cloud Object Storage

Table-2: Application Characteristics:

S. No	Characteristics	Description	Technology
1.	Android Application	The android application is made using Android Studio.	JAVA and XML
3.	Cloud	Cloud is used for managing the components of the application	IBM Cloud and SQL
4.	Cloud Database	Cloud database is a database built to run in a public or hybrid cloud environment to help organize, store, and manage data within an organization.	IBM DB2 and IBM Cloud Object Storage
5.	Container	Containers are packages of software that contain all of the necessary elements to run in any environment.	IBM Container Registry
6.	Website (Admin)	The admin website is used to manage all the things related to the software.	HTML, CSS, Bootstrap, JavaScript
8.	Availability	The application will be running on cloud and it is available 24x7.	IBM Cloud
9.	Performance	The performance of the application will be fast and responsive.	Cloud based application

CREATE IBM ACCOUNT

The screenshot shows the 'Profile' page in the IBM Cloud user interface. The left sidebar contains links for 'Profile', 'Active sessions', 'Login settings', and 'Notification preferences'. The main content area is titled 'Profile' and contains a 'Contact information' section with an 'Edit' link. The contact information includes a profile picture placeholder with an 'Upload a photo' button, and fields for 'User ID' (19p217@kca.ac.in), 'Password' (masked), 'Email' (19P217@kca.ac.in), 'Role' (with a note to click 'Edit' to enter a role), 'Name' (Kalaipriyan C), 'Industry' (with a note to click 'Edit' to enter an industry), and 'Language' (English). A blue 'Save' button is located at the bottom right of the profile card.

The screenshot shows the 'Dashboard' page in the IBM Cloud user interface. The left sidebar contains links for 'Dashboard', 'Resources', 'Catalog', 'Manage', and 'Kalaipriyan C's Account'. The main content area is titled 'Dashboard' and contains a 'For you' section with a 'Select an option' dropdown. The 'For you' section includes six cards: 'Build' (Explore IBM Cloud with this selection of easy starter tutorials and services), 'Use Watson Studio' (Watson Studio provides a suite of tools and a collaborative environment for data scientists, developers and domain experts), 'Set up your IBM Cloud account' (Learn how to set up your IBM Cloud account, manage your account settings, organize resources, and control access to those resources), 'Discover the Watson Internet of Things (IoT) Platform' (Use the built-in web console dashboards to monitor your IoT data and analyze it in real time), 'Build a web app with Watson Speech to Text' (Deploy a conversational interface compatible with any application, device, or channel), and 'Build a Virtual Private Cloud (VPC)' (Upgrade to a paid account to create your own protected space in the IBM Cloud). Each card has a 'Getting started' button and a '10 min' duration. A 'Create resource' button is located at the top right of the dashboard. Below the 'For you' section is a 'News' section with a 'View all' link and three news items: 'TruistRadian Best Software: Five IBM Offerings to Make the List', 'Announcing IBM Cloud Pak for Network Automation Version 2.4', and 'No Prerequisites for IBM Cloud Certifications'. A blue 'Save' button is located at the bottom right of the dashboard.
